Woodworking Tools 2 is a Java-based app that lets you put your woodworking knowledge to the test. It includes 50 unique tests about the tools used in carpentry, from hand tools like saws to power tools like drills and hammers. Each test can be played with and without visual aids, like drawings or photos of the tools, and the app records your results as you go. Each test includes a learning mode, which can be useful for helping you learn the basics of the tool, and a game mode, which is designed to help you review what you already know about the tool. While studying, each test is divided into two sections: a pre-test and a post-test. With the pre-test, you are asked a series of questions about the tool. After each question is answered, the post-test is displayed, and you are given a score that indicates your performance. You will also receive a score at the end of the test, which helps determine your rank and how much more time you need to spend studying. Your Score: How well did you do? Your rank is a guide to how much more time you need to spend studying the tool. Your rank can also be a guide to your progress towards achieving your goal of completing the course. The lower your rank, the better! Your Score is computed using the following formula: Your Rank: How well did you do? How much more time do you need to spend studying the tool? Your Total Score: This represents your overall performance, and is the average of your score for each test.
